FROM: Doug Jensen, Senior Reclamation Specialist *D. Jensen*

RE: Site Inspection, Quarry Antone & Little Mountain Quarries, M/045/005 & M/045/021, Tooele County, Utah

Date of Inspection: March 27, 2002
Time of Inspection: 1:00 P.M.
Conditions: Clear, Sunny & Breezy
Participants: Harry Philip, Greg Morical, Rod Simmons - Lone Star Industries; Mike Malmquist - PB&L; Brian Buck - JBR, Tom Munson, Doug Jensen - UDOGM

Purpose of Inspection: Review Inactive Status & Bond Adequacy of Sites

Background:

The inspection of these sites was a result of a Division letter requesting updated information needed for escalation of the bonds presently being held for each site. This letter also stated that because these sites had been inactive for a period beyond that which requires reclamation (ten years) the Division requested a written response explaining why the Division should not require immediate reclamation of both sites.

Lone Star has requested an additional five-year extension (letter attached) of the rule requiring reclamation of these sites (the sites have been inactive since 1988). The company is requesting this extension to allow the company to evaluate the future potential of these properties. Future plans for Lone Star may include the construction of a cement plant in this area. If these plans come into fruition these two sites would provide essential feedstock for these plant

JBR Environmental Consultants, Inc was retained by Lone Star to check the bond estimates calculated for these two sites and recalculate the costs to today's equipment and labor costs. A bond amount for each site was calculated using the Means cost index. The amount to reclaim the Little Mountain Quarry was \$59,055 and Quarry Antone was \$44,494. These costs do not include an escalation factor used by the Division to account for inflation during the term of the bond (5 years).

Bond amounts have been calculated by the Division utilizing cost and labor factors furnished by JBR. A copy of these surety estimates are attached.

Observations:

The first site visited was the Quarry Antone. The pit at this site was formed by utilizing a slot type method of mining, the slot is ~ 30 feet wide at the floor. A limestone bedding plane standing at ~70 degrees forms the south highwall of the slot and is very stable. The north highwall is formed of a shale and stands at ~ 80 degrees and does show signs of minor spalling. There is one small dump located on the site that has become overgrown with rabbit brush. The entire site with the exception of the pit bottom, the highwalls, a small push-up area and the access road has naturally revegetated itself and the site shows no evidence of erosion problems. This site is presently permitted and bonded for 13 acres of disturbance; approximately 5 to 6 acres have been affected by mining activities to date. The bond amount calculated for this site is sufficient to reclaim this site.

Little Mountain Quarry was visited next. This site is also appears to be very stable. The mining method used at this site is removal of a hillside. A limestone bedding plane standing at ~70 degrees form a very stable highwall at this quarry. This site was permitted to disturb 20 acres, approximately 9 to 10 acres have been disturbed to date. The bond calculated for this site is sufficient to reclaim the disturbance.

There are two waste disposal areas associated with this quarry; the dump slopes on each area have become naturally revegetated since the site became inactive. The quarry highwall, floor, the stock pile area, a small silt pond and the access road are the only areas at the site that have not become overgrown since this mining area became inactive. These features form a small portion (~4 to 5 acres) of the overall disturbance associated with this site.

Conclusions and Recommendations:

Both sites appear very stable with no slope stability or erosion problems. Due to lack of any mining activity since 1988, much of the disturbed areas at both sites have become naturally revegetated.

Allowing these sites to remain for an additional five-year period should not result in any significant onsite or offsite environmental impacts or public health and safety concerns to the surrounding area.

**DIVISION OF
OIL, GAS AND MINING**

Re: Antone Quarry (M/045/021) and Little Mountain Quarry (M/045/005)

Dear Wayne:

This letter serves four purposes. First, it explains the circumstances behind Lone Star Industries, Inc. (Lone Star) delayed request for extension of the permits for the above-referenced mines. Second, it documents the recent course of dealings between Lone Star and your office, the Division of Oil, Gas and Mining (Division) regarding the two mines, and particularly regarding efforts to extend the mining permits and update the reclamation bonds. Third, it includes updated estimates of reclamation costs prepared by Lone Star and its consultant, JBR Environmental (JBR), for your review and consideration as the basis for new or supplemental reclamation bonds for the two mines. And fourth, it requests that the Division extend the mining permits for the two mines for an additional five-year term.

As you know, these four topics have been the subject of a series of phone conversations and written and e-mail correspondence between representatives of Lone Star and your office over the last several months. By mutual agreement, Lone Star is summarizing those discussions in this letter, and formally requesting extension of Lone Star's permits. Lone Star understands that the Division is not likely to make a decision on this request until after a site visit, which may not be possible for a few weeks or months due to winter conditions.

Delayed Extension Request

As you know, by letter of April 3, 2001 the Division notified Lone Star that it had reviewed the status of the Antone and Little Mountain mines and determined they had been inactive since 1988, a period of more than 10 years, and that under Division regulations Lone Star was required to make a showing as to why the mines should continue to be held in suspended status and not

reclaimed. The primary reason that Lone Star did not make such a showing prior to or during 1999 (or 2001) was that during the relevant time period, Lone Star underwent a major corporate reorganization which led to a move of corporate headquarters from Stamford, Connecticut to Indianapolis, Indiana, and to a significant downsizing and change of personnel. In the process, the staff person responsible for Lone Star's Utah properties left the company and some of the relevant files for those properties were lost. In effect, during the period of corporate transition, Lone Star lost track of the status of the Utah properties during the relevant time period.

Recent Course of Dealings

By letter dated May 14, 2001, Lone Star responded to the Division by acknowledging receipt of the Division's April 3rd letter and informing the Division that Lone Star would institute a review of the mines' status so that it could respond to the Division's request. In July 2001, Lone Star wrote the Division twice, once to pay the annual permit fee for the two mines (July 3rd), and once to request a copy of the Division's permit files for the mines because Lone Star's initial review indicated that its files were incomplete (July 6th). Following receipt and review of the files, Lone Star retained local counsel and contacted your office to set up a meeting and site visit as a first step in the process for extension of the mine permits, as confirmed by Lone Star in a letter to your office dated October 30, 2001.

A meeting and site visit with Division staff was then scheduled but was postponed by mutual agreement due to the onset of winter conditions. In the meantime, your staff requested that pending rescheduling of the meeting and site visit (which depends on the onset of spring conditions), Lone Star should review the reclamation plans and prepare updated reclamation cost estimates for the mines, for consideration by the Division. In response, Lone Star retained JBR Environmental, a local engineering firm, and performed the requested reclamation cost review, which is discussed below.

As you know, during the period of the above-referenced written correspondence there were also several e-mail and phone contacts between Lone Star with you and your staff regarding these same issues.

Updated Reclamation Cost Estimates

Currently, the Division holds reclamation bonds posted by Lone Star for the Antone Quarry mine in the amount of \$34,400, and for the Little Mountain Quarry mine in the amount of \$56,200. For the Antone Quarry mine bond, the cost estimate prior to application of the 5-year escalation factor was \$29,700. For the Little Mountain Quarry mine bond, the pre-escalation cost estimate was \$45,791.

Lone Star and JBR have reviewed the reclamation plans and the existing cost estimates and have calculated updated estimates using unit costs based on current construction estimating guidebooks and recent contractor estimates. The justification for the updated cost estimates, and a comparison to the existing estimates, is provided in Attachment 1 to this letter. In general, the updated estimates utilize the same equipment and quantities that were used for the existing bonds, with specified exceptions. For example, it was determined that the prior estimate did not

include cost estimates for highwall monitoring, revegetation monitoring and reporting, contingencies, and mobilization costs, so estimates were made for these items and added into the total. In addition, the cost estimate for fencing was adjusted to account for what appears to have been an error in the original calculation of the amount of fencing that would be required.

Based on these and other considerations detailed in Attachment 1, the updated reclamation cost estimate for the Antone Quarry mine is \$44,494; applying the Division's current escalation rate of 3.12%, the 5-year escalated reclamation estimate is \$51,882. The updated reclamation cost estimate for the Little Mountain Quarry mine is \$59,055; applying the Division's current escalation rate of 3.12%, the 5-year escalated reclamation estimate is \$68,861.

These are the updated, escalated reclamation cost estimate amounts that Lone Star proposes for bonding purposes for the two mines: \$51,882 for the Antone Quarry mine and \$68,861 for the Little Mountain Quarry mine.

Extension of Mine Permits

Lone Star requests that the Division extend the mining permits for the two properties, in suspended status. In its current round of strategic planning, Lone Star is considering constructing a cement plant in Tooele within the next five years, using one or both of the subject properties to supply necessary stone to the plants. As you know, Tooele County is one of the fastest growing areas in Utah, and Lone Star believes this growth presents significant potential for the reopening and use of the mines. Lone Star also understands that some of the existing quarries and pits that serve as sources for cement plants in the area are nearing depletion or are in areas where continued county zoning approvals are somewhat uncertain, which should provide opportunities to supply those facilities with stone from the two properties.

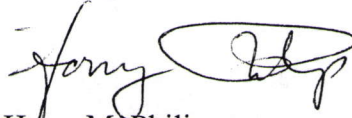

In addition, Lone Star has recently been approached by a third party with a proposal to mine clay or shale from either or both of the mines, under a joint venture or similar arrangement. If an agreement can be reached with this party, and if the material turns out to be of commercial grade, active mining could be a possibility in the relatively near future.

Based on the above, Lone Star requests that the Division extend its permits for the Antone and Little Mountain mines, said mines and permits to be in "inactive" status for the time being. In connection with the same, Lone Star proposes that the bond amounts for the two properties be increased to the amounts specified above (\$51,882 for the Antone mine and \$68,861 for the Little Mountain mine), which Lone Star would accomplish through the posting of a replacement bond or the posting of a supplemental bond or bond rider with the Division for each mine.

Lone Star understands that prior to making a decision on permit renewal, the Division still desires to conduct a field inspection of the two mines with Lone Star personnel, in order to ensure there are no problematic conditions at the site. Lone Star agrees this would be appropriate and stands ready to join the Division in such an inspection, once the site becomes accessible and the snow cover has thinned to the point where meaningful observation of the mines can be made.

Thank you for your consideration of this letter and of Lone Star's request for extension of its mine permits. We look forward to working with you and your office in this matter.

Sincerely,

A handwritten signature in black ink, appearing to read "Harry M. Philip", enclosed within a large, loopy oval shape.

RE: Little Mountain and Antone Quarries, Tooele County, Utah

Dear Mr. Philip:

We have completed our review of the reclamation plan files for the Little Mountain and Antone quarries in Tooele County, Utah. We reviewed the reclamation plans against the current Utah Division of Oil, Gas, and Mining regulations (DOGM) (Rule R647-4. Large Mining Operations), to identify any regulatory issues that might need to be addressed at this time if Lone Star Industries intends to extend life of these permits. We also updated the reclamation cost estimates. The following items were noteworthy for review in this report:

1. We do not see any deficiencies in the approved mining and reclamation plans that would need to be changed before submitting a revised reclamation cost estimate to DOGM.
2. We prepared the attached cost estimates using the same quantities and methods last used by Lone Star. The tables show the previous cost estimate prepared for each property and the new one. We also show the existing bond amount for each property. The second sheet of the estimate provides some explanatory information. We have generally kept the equipment and quantities the same as the previous estimates but have updated the unit costs based on current construction estimating guidebooks and recent contractor estimates.
3. Both the Little Mountain and Antone permits include a variance from R647-4-111.7 which allows highwall slopes at the quarries to be left at an angle steeper than 45 degrees. The variance requests discussed monitoring the highwalls on a periodic basis. The previous estimates did not include an allowance for this monitoring activity. We have included three annual survey events to accomplish this monitoring in our new cost estimates.
4. Rule R647-4-111.13 describes the general revegetation requirements for successful reclamation and indicates that the revegetation must meet certain characteristics three years following the reclamation before DOGM will consider the reclamation complete. This would require a revegetation inspection and report to

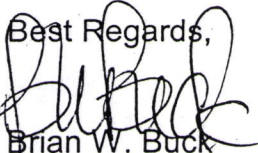

DOGM in the third year following the seeding for each property. We have included \$1,200 for this in our new cost estimates for each site.

5. The past fencing estimate for Little Mountain showed 8,078 linear feet being required although the permit area boundary is about 4,500 linear feet long. From inspection of the maps for this site we cannot determine why the larger quantity of fencing was included in the previous cost estimate. We have used the smaller quantity in our new reclamation cost estimate.
6. DOGM typically includes a contingency amount in reclamation cost estimates to cover unexpected costs. This was done for the previous Antone reclamation cost estimate but not for the Little Mountain one. We have included a 10% contingency for both new cost estimates.
7. The previous reclamation cost estimates did not include any costs for mobilization of the equipment to the sites. This may be appropriate for active mines with equipment on site at the end of operations but for the current inactive condition of both quarries, we think a moderate mob/demob cost is appropriate and \$1,000 for this has been added to the new cost estimates for each site.

The second sheet of the estimate provides descriptions of the reasons why we selected the unit costs used in our new cost estimates.

Please let me know if you have any questions or comments on this information.

Best Regards,

Brian W. Buck
Vice President
